

Cesky Gold® Dwarf Birch
Betula x plettkei 'Golden Treasure'

Height: 4 feet

Spread: 3 feet

Sunlight: ☉ ●

Hardiness Zone: 2

Description:

An interesting shrub with exceptional cold tolerance; emerging foliage displays hues of yellow, red, and orange, maturing to chartreuse for the rest of the season; a good utility shrub for garden detail; takes pruning well; impressive in groupings

Ornamental Features

Cesky Gold Dwarf Birch has chartreuse foliage which emerges yellow in spring. The serrated oval leaves do not develop any appreciable fall colour. Neither the flowers nor the fruit are ornamentally significant.

Landscape Attributes

Cesky Gold Dwarf Birch is a multi-stemmed deciduous shrub with an upright spreading habit of growth. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a relatively low maintenance shrub, and should only be pruned in summer after the leaves have fully developed, as it may 'bleed' sap if pruned in late winter or early spring. It has no significant negative characteristics.

Cesky Gold Dwarf Birch is recommended for the following landscape applications;

Planting & Growing

Cesky Gold Dwarf Birch will grow to be about 4 feet tall at maturity, with a spread of 3 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a slow rate, and under ideal conditions can be expected to live for 60 years or more.

This shrub does best in full sun to partial shade. It is quite adaptable, preferring to grow in average to wet conditions, and will even tolerate some standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.
